

# Blending languages

Using the conditional content idea:

**I love r**

**R**

This is how you add in R.

```
1 + 1
```

```
[1] 2
```

**Python**

This is how you add in Python.

```
2 + 2
```

```
4
```

## Questions

- What is the namespace for the div attributes?
- Where can you propagate yaml data to?
  - yes: a params var in r chunk
  - yes: a format var as attribute to .content-visible class
  - ?: arbitrarily named vars in code chunks or classes?
